

identical scout → route-head channel across all six conditions — only the payload changes; 6,000 episodes per seed, frozen executor

Content-controlled communication experiment

4,483 trainable params on a 66-d wire

one 66-float wire, shared by every condition

2 anchor
($\Delta\text{pos} / r$)

64 content floats

held fixed

same 66-float wire

same anchored delivery

same frozen executor

only the message content is
the independent variable

row 6 breaks the width on purpose —
that is what makes it a ceiling
