

1. the decision

2. why it never happens by chance

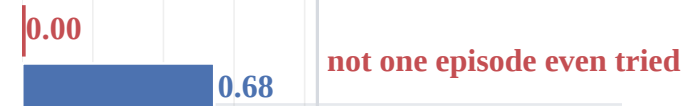

at the 3 s mark

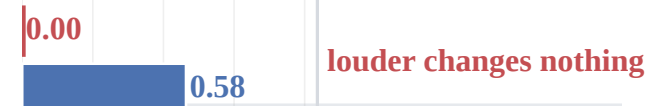

3. what actually worked

the policy's own noise (all six races used this)

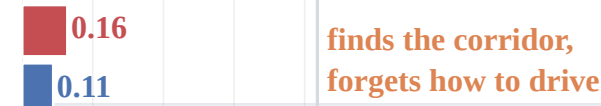

the same noise, turned up 1.8x

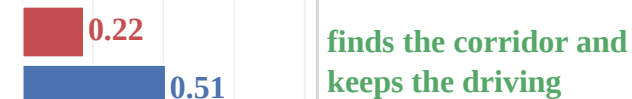

the same noise, made to persist for ~3 s

persistent and 3.0x louder, every axis, all episode

persistent and 8.1x louder, sideways only, first 4 s

fraction of 128 test episodes

reached the other corridor

still finished the task
